

Secured Enterprise Architecture

HEMISPHERE is pleased to announce a partnership with the Metadata Management Corporation, Ltd. (MMC) to provide advanced capabilities in secured architecture design and enhanced change management.

Mission

Assist Federal agencies, DoD agencies and services in complying with and gaining benefit from, legislative mandates for producing and disseminating Information Technology Enterprise Architectures.

We bring a passion for detail and quality, an obsession with extracting usefulness and value, and a proven track record of planning, developing, producing, storing, managing and exploiting integrated enterprise architectures.

Metadata Management Corporation, Ltd. (MMC), is a small, woman-owned corporation based in Fairfax, VA. Founded in 1995, MMC is an established firm comprised of professional and talented technologists, strategists, and consultants. We have been in business over 20 years and have successfully served Federal Agencies and Department of Defense organizations over these years.

What is unique about us?

We are highly involved with our customers and are committed to providing high quality, high integrity, and highly skilled services. Our customers have consistently given 95% or better satisfaction rating.

Our flagship product *DesignBank*, is used by both the Air Force and Army to assist in developing useable integrated Department of Defense Architecture Framework (DoDAF) architectures. We also develop custom architecture software tools that are innovative and tailored to a customer's requirements. We have built standalone, client-server and web-based architecture tools and repository software that are used worldwide and are based on industry standard platforms such as Oracle, Microsoft SQL Server, Unix, Microsoft Windows, ASP, .NET, and other web technologies. Our web software content is dynamic and is served from database storage and built on the fly. Our browsing techniques are innovative.

We believe in transferring the know-how back to the customer. It is our goal to educate and train our customers on how to best use and maintain their data. MMC stands ready to step in when needed, but the goal is to make our customers smart.

OUR APPROACH

Utilizing industry best practices and proven Enterprise Architecture techniques, MMC's suite of Enterprise Architecture tools will help you federate your projects across your enterprise, providing actionable analysis for cost savings and enhanced performance.

OUR GOAL

Our goal is to provide solutions that reduce the customer's vulnerability to change, trends and whims. To manage the enterprise so the customer can evaluate their information and be proactive instead of reactive. The ability to assess impact and be decisive, informed and creative in their decision making.

This can only be carried out by implementing a managed approach to the information about an enterprise, its data and its software systems. Our flagship product DesignBank, is a classic repository which was developed to fill the gap between concept and concrete. DesignBank was born out of the necessity to capture and manage metadata in a storage facility and respect the other pieces to the puzzle that gives credence to an artifact's existence.

Front End Architecture Services

- Justify and Propose Architecture Projects
- Specify Architecture Requirements
- Initiate and Manage Architecture Project/Program Office
- Provide Jumpstart Architecture Training
- Facilitate Architecture Program/Project Planning
- Write Requests for Proposals (RFPs) for Architecture Projects
- Provide Architecture Methodology Training

Architecture Project Execution (Services and Tools)

- Detailed Architecture Methodology and Process Training
- Quality Control
- Architecture Construction/Production
- Data Discovery
- Data Management
- Release Management
- Architecture Baselining
- Risk Management

A la carte Architecture and Modeling Services

- Data Modeling/Database Modeling
- Process Modeling
- DoDAF Product Construction
- Object Oriented Analysis and Design
- Business Modeling
- Capabilities Based Acquisition
- Service Oriented Architectures

Backend Architecture Utilization (Services and Tools)

- Architecture Dissemination and Distribution
- Operational Analysis
- Systems Analysis
- Data Administration
- Data Call/Submission Responses
- Business Process Re-Engineering
- Technology Roadmap Construction
- Data Integration
- Process Integration
- Application Portfolio Management
- Outsourcing Support
- Capital Planning
- Disaster Recovery Planning
- Migration Planning
- Sarbanes-Oxley Compliance
- Continuity of Operations Planning (COOP)

Maximizing your operations through greater effectiveness
